Keymacro is a keymapping and macro recorder, and a part of the Keymacro for Mac 4 application suite. Keymacro provides several options to record, edit and playback macros and make them available in almost any program. Macro recording: Keymacro enables you to record keystrokes or mouse clicks. You can record any keystroke combination and its duration, or enter a keystroke or click on the mouse, drag it to the desired location on your screen and release it there. Keymacro also enables you to set your own hotkeys (shortcuts) and a maximum number of simultaneous hotkeys. With the recording option, you can record a sequence of keystrokes with many different options, including: Customizing hotkeys for different macros Recording a single keystroke Single mouse clicks Clicks on any window, or any menu item on any window Macro playback: Keymacro supports the playback of recorded macros. You can use any key in your keyboard to trigger a given macro. You can also use the mouse to move the mouse pointer to the mouse cursor and click in the location where you want the mouse to release. You can adjust the delay between each mouse click or keystroke, and the duration of the playback. Macro editing: Keymacro provides several options to edit and perform a single or multiple macros. You can edit macros from within the program. You can export macros to other applications. Keymacro also provides a settings window that enables you to modify keymapping options, macro recording duration, the position of hotkeys, the default key for a keystroke or a mouse click, and the default action. Keymacro provides a control bar at the top of the window to make hotkey adjustments, for example to change the default key for a keystroke or a mouse click. Keymacro is a very versatile application, and can be used to automate repetitive actions, perform functions, and create macros to perform actions with a mouse, a keyboard or both.
