Review: I've been trying out a lot of text editors lately and I came across this one, which is quite decent. It is available for free, has a great interface and everything I've tried so far, was quite usable. I guess that using text editors is like using an everyday paper and pen, so the more variety you get to choose from, the better it is! The interface is very nice, with a decent colour scheme that is consistent. It gives you a wide range of options to customize the look and feel of your text and the interface remains responsive throughout the process. The text editor does not feature a pagination functionality and so, you cannot use the browser to navigate through it. However, it comes with a list of all your files, which you can use to jump to where you were last. What really makes this editor

I've made a very simple setup: index.html: Hello main.js: var main = { hello: function() { console.log("hello"); } }; other.js: var other = { hello: function() { console.log("world"); } }; I would expect the output to be "hello" for the main.js and "world" for the other.js. But the output is always "hello". The code can be checked at codepen.io Edit: The reason for trying to accomplish this, is to export and import functions so I can add them to an existing object, and then later on use them by importing the exported function. A: You need to export the functions like: other.js: var other = { hello: function() { console.log("world"); } }; export default other; To then
