Genetic differences in fatty acids in experimental atherosclerosis. C57BL/6 mice fed a cholesterol-rich diet develop atherosclerosis. Using this model, it has been demonstrated that a high-fat diet significantly increases atherosclerosis in mice. However, it is not known whether genetic differences in fatty acids contribute to the development of atherosclerosis in mice. Therefore, we fed male C57BL/6J and C57BL/6N mice (N = 6 each) a 0.3% cholesterol diet for 5-6 weeks. Fatty acid concentrations were then measured in plasma and tissues. A significantly higher plasma triglyceride level was found in C57BL/6N mice than in C57BL/6J mice. C57BL/6N mice had significantly higher concentrations of alpha-linolenic, eicosapentaenoic, docosapentaenoic, docosahexaenoic, and linoleic acids in the liver and heart than C57BL/6J mice. Significantly higher concentrations of gamma-linolenic, stearidonic, dihomo-gamma-linolenic, arachidonic, and adrenic acids were found in the liver of C57BL/6J mice than C57BL/6N mice. These data demonstrate that genetic differences in fatty acids contribute to the development of atherosclerosis in mice. Jeff, The PG&E corporate risk management group will be meeting in a few weeks. We want to discuss the possibility of gathering this information and getting it to you early in order to have it in your files when we meet. We would like to meet with you this week if possible. I have asked Christi Nicolay about your schedule, but have not had a response. I think we should discuss what type of information we want to get from PG&E. Would it be beneficial to you for us to obtain the following: Number of PG&E customers? Percentage of all PG&E customers served? Percentage of all PG&E customers that are on metered service? Percentage of all PG&E customers served at PG&E's facilities? Total number of lines of transmission at PG&E's facilities? To the best of our knowledge, this is the type of information that the PG&E corporate risk management group a1d647c40b

An internal memo written by a senior adviser to David Cameron says that the Prime Minister will consider banning the sale of Huawei smartphones in Britain. A copy of the memo, entitled "Not Huawei" and dated 9th November, was leaked to The Telegraph. It details a warning that the country will have to make a decision on the world's largest telecommunications equipment maker "within the next 6-8 weeks". In the memo, Edward Lucas, who is the political editor of The Economist, says that the UK government is "driven towards a decision on Huawei" after a meeting last month with Gavin Williamson, the Defence Secretary. Williamson reportedly told the meeting that a ban on the sale of Huawei products in the UK "would be highly damaging".
